After a "support" call

The apps a fake support caller asks you to install.

And why deleting them isn't the end of it.

PacketCheck

Real apps, used for the wrong reason.

IT teams use these every day. A caller asks you to install one so they can see and control your screen.

- AnyDesk
- TeamViewer
- UltraViewer
- ScreenConnect
- RustDesk
- Supremo
- AeroAdmin
- LogMeIn Rescue

Already on your PC

Quick Assist is built into Windows.

Callers ask you to open it and read out a code. Microsoft has warned about exactly this. If someone you did not call asks for the code, hang up.

Why antivirus stays quiet.

These apps aren't viruses. They're signed, legitimate software, so most antivirus lets them run. The danger is who is on the other end.

Check

UltraViewer is on this computer

Remote-control software lets someone see and drive this computer. Scammers often install it during a fake support call and it stays after you delete their app.

```
service UltraViewer_Service: Running, starts Auto
```

What PacketCheck shows when it finds one.

Deleting the icon isn't enough.

Most of these install a background service and a startup entry. The icon goes; the door stays open.

```
Icon on desktop .... deleted
Service ............ Running, starts Auto
Startup entry ...... still there
```

Check by hand in 5 minutes.

1 **Settings → Apps → Installed apps**

Uninstall any of these you did not choose.

2 **Windows + R, type services.msc**

Make sure none of the names is still listed.

3 **Task Manager → Startup apps**

Disable anything you don't recognise.

4 **Settings → Accounts → Other users**

Look for an account you didn't create.

Or check it all in 30 seconds.

PacketCheck is a free, read-only scan for remote-control apps, Remote Desktop, startup items and admin accounts. Nothing is uploaded.

packetcheck.net

Nobody from PacketCheck will ever call you.
